This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- Winery wastes anaerobic digestion using different hydraulic retention times (HRT)
- Long HRT didn't improve process performances and removal efficiencies
- Biogas production rate depends on type of organic compounds in the feed
- Automatic feeding system was set-up on basis of biogas production rate
- The automatic system increased organic loading rate and the biogas production
