This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- An approach for selecting and combining methods for sustainable design is proposed.
- 29 methods were categorized regarding a taxonomy for method selection.
- The taxonomy maps sustainability related design targets to respective methods
- Combination of methods leads to a more holistic perspective on the product.
- An information platform for method application fosters combination of methods.
