This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

1. A rare case: successful, large, incentivized, residential food waste diversion scheme.
2. Social norms were nearly as significant as incentives, at the start of the scheme.
3. Most participants expected to continue even if incentives ended, because of habit.
4. Habit was cited as the main reason participants might continue if incentives stopped.
5. Improved site cleanliness (perceived, not seen) was a key motivator for continuing.
