This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Pesticides are massively used in developing countries and threat people's health -> theoretical models predict that land ownership affects the use of pesticides -> this issue is studied on a sample of Vietnamese farmers -> the analysis shows that the quantities used grow with the share of land owned -> government programs need strengthening to decrease the use of pesticides.
