This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

DESIGN OF OPTIMAL TANK SIZE FOR RAINWATER HARVESTING SYSTEMS THROUGH USE OF A WEB APPLICATION AND GEO-REFERENCED RAINFALL PATTERNS

Highlights

Hydrology, Statistics and GIS were regarded in order to develop software with a multidisciplinary approach.

This informatics tool has an interface through web access but geographically constrained.

The web application was used for 9 scenarios in urban areas of Mexico.

Water savings up to 46,500 L were reached in the assessment for average conditions.
