First Light Curve Analysis of the High-Amplitude Delta Scuti Star
GSC 4552-1498

S.J. Jafarzadeh , A. Poro

PII: S1384-1076(16)30177-4
DOI: [10.1016/j.newast.2017.01.009](https://doi.org/10.1016/j.newast.2017.01.009)
Reference: NEASPA 1072

To appear in: *New Astronomy*

Received date: 4 December 2016
Revised date: 12 January 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Photometric observation analysis of GSC 4552-1498 through three filters is presented.
- New ephemeris and oscillation modes are calculated and two-color diagram is depicted.
- Physical parameters of the star are determined based on the main period.
