This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- Analysis is performed for viscous fluid model in a porous media.
- Results are analyzed for dual nature solutions within the boundary layer domain.
- Convective boundary condition is considered at surface.
- Skin friction, Nusselt number, stream lines and isotherms behavior is also analyzed.
