This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Boundary layer flows of a Maxwell fluid with Caputo-Fabrizio derivatives are studied.
- The comparison between ordinary Maxwell fluid and fractional Maxwell fluid is made.
- After a critical value of the time t , the fractional fluids flow slower than ordinary fluids.
- It is possible to find a vortex sheet only for the ordinary Maxwell fluid.
