This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- The three-dimensional mixed convection stagnation-point flow is investigated numerically
- A permeable vertical stretching/shrinking sheet with a velocity slip is investigated
- The partial differential equations are transformed into ordinary differential equations
- Dual solutions are found for a certain range of the shrinking and suction parameters
