Abstract

Various models of quantum gravity suggest a modification of the Heisenberg's Uncertainty Principle, to the so-called Generalized Uncertainty Principle, between position and momentum. In this work we show how this modification influences the theory of angular momentum in Quantum Mechanics. In particular, we compute Planck scale corrections to angular momentum eigenvalues, the hydrogen atom spectrum, the Stern-Gerlach experiment and the Clebsch-Gordan coefficients. We also examine effects of the Generalized Uncertainty Principle on multi-particle systems.

Contents

1	Introduction	2
2	Modified Angular Momentum Algebra	3
3	Modified Angular Momentum Spectrum	4
4	Modified Energy Levels of the Hydrogen Atom	6
5	Inclusion of a Magnetic Field	7
5.1	Uniform Magnetic Field	8
5.2	Non-Uniform Magnetic Field: Stern-Gerlach Experiment	8
6	Multi-Particles Systems	10
6.1	Dependence of $[L_i, L_j]$ on the number of particles	10
6.2	Addition of Angular Momentum	11
6.3	Clebsch-Gordan Coefficients	12
6.3.1	Orthogonality relations	13
6.3.2	Clebsch-Gordan Recursion Relation	13
6.3.3	Clebsch-Gordan Coefficient Tables	14
7	Conclusions	15
	Appendix A GUP modified angular momentum commutator	16
	Appendix B Clebsch-Gordan Coefficients	17
B.1	$L = L_{\max}, M = L_{\max}$	17
B.2	$M = L_{\max} - 1$	17
B.2.1	$L = L_{\max}$	17
B.2.2	$L = L_{\max} - 1$	18
B.3	$M = L_{\max} - 2$	18
