Abstract

The approximate analytical solutions of the Dirac equation with Hellmann-Frost-Musulim potential have been studied by using the generalized parametric Nikiforov-Uvarov (NU) method for arbitrary spin-orbit quantum number k under the spin and pseudospin symmetries. The Hellmann-Frost-Musulim potential is a superposition potential that consists of Yukawa potential, Coulomb potential, and Frost-Musulim potential. As a particular case, we found the energy levels of the non-relativistic limit of the spin symmetry. The energy equation of Yukawa potential, Coulomb potential, Hellmann potential and Frost-Musulim potential are obtained. Energy values are generated for some diatomic molecules.

Keywords: Dirac equation, Hellmann potential; Frost-Musulim potential; Wave equation; Eigensolution; Nikiforov-Uvarov method.
