Erythrocyte deformability and aggregation responses to intermittent and continuous artificial gravity exposure

Grau Marijke , Abeln Vera , Vogt Tobias , Bloch Wilhelm , Schneider Stefan

PII: S2214-5524(16)30109-2
DOI: [10.1016/j.lssr.2017.01.004](https://doi.org/10.1016/j.lssr.2017.01.004)
Reference: LSSR 120

To appear in: *Life Sciences in Space Research*

Received date: 12 December 2016
Revised date: 27 January 2017
Accepted date: 30 January 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Continuous artificial gravity affects red blood cell rheology
- Continuous artificial gravity may impair oxygen supply in the microcirculation
- Intermittent artificial gravity has no impact on red blood cell rheology
