This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights for “A method to recover water-wave profiles from pressure measurements”

-
- We propose a method to recover surface elevation profiles from pressure measurements.
 - It is more accurate than traditional means for nonlinear traveling waves.
 - It is as computationally efficient as linear theory.
 - Experimental comparisons show the method works for interacting waves and wave groups.
