

## Accepted Manuscript

Mechanism of shear attenuation near the interface under combined compression and shear impact loading

Bo Wang, Ke Zhang, ShiTang Cui, ZhiPing Tang

PII: S0165-2125(17)30074-4  
DOI: <http://dx.doi.org/10.1016/j.wavemoti.2017.06.003>  
Reference: WAMOT 2169

To appear in: *Wave Motion*

Received date : 19 December 2016  
Revised date : 8 June 2017  
Accepted date : 9 June 2017

Please cite this article as: B. Wang, K. Zhang, S. Cui, Z. Tang, Mechanism of shear attenuation near the interface under combined compression and shear impact loading, *Wave Motion* (2017), <http://dx.doi.org/10.1016/j.wavemoti.2017.06.003>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlight:

1. The relation between shear attenuation and wave propagation is discussed.
2. Destination of state along the wave is pure shear plus a hydrostatic pressure.
3. Wave structures in particle velocity space with different loading are obtained.
4. The maximal transverse particle velocity is obtained.
