This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- We review the current information regarding treatment of age-related hearing loss by using Inner Ear Hair Cell regeneration.
- Recent studies open a door to the future for the treatment of hearing loss linked to ageing.
- Cochlear cell regeneration may be useful for the treatment of age-related hearing loss.
