This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Older adults with moderate to severe hearing loss had greater odds of being retired
- Use of a hearing aid was associated with significantly lower mean retirement age
- Concurrent visual loss and hearing loss was linked to lower mean retirement age
