This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- Korean women aged under 20 years at first childbirth were significantly more likely to experience delayed-onset asthma.
  - Higher parity showed a tendency toward correlation with the prevalence of delayed-onset asthma.
  - This general population-based study on the prevalence, risk factors, and comorbidities of asthma will contribute to the prevention and management of asthma and its comorbidities among Korean individuals.
