Title: Glycation stimulates cutaneous monocyte differentiation in reconstructed skin *in vitro*.

Authors: H. Pageon, H. Zucchi, F. Rousset, S. Hubert, E. Tancrede, D. Asselineau

PII: S0047-6374(16)30135-X
DOI: <http://dx.doi.org/doi:10.1016/j.mad.2017.02.001>
Reference: MAD 10925

To appear in: *Mechanisms of Ageing and Development*

Received date: 8-8-2016
Revised date: 7-11-2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Investigation of monocytes differentiation in reconstructed skin.
- AGES potentiate monocytic differentiation in reconstructed skin.
- Macrophages in skin from aged donors are correlated with the level of AGEs.
