Akaryotes and Eukaryotes are independent descendants of a universal common ancestor

Ajith Harish, Charles G. Kurland

PII: S0300-9084(17)30108-6

DOI: [10.1016/j.biochi.2017.04.013](https://doi.org/10.1016/j.biochi.2017.04.013)

Reference: BIOCHI 5190

To appear in: *Biochimie*

Received Date: 3 January 2017

Accepted Date: 25 April 2017

Please cite this article as: A. Harish, C.G. Kurland, Akaryotes and Eukaryotes are independent descendants of a universal common ancestor, *Biochimie* (2017), doi: 10.1016/j.biochi.2017.04.013.

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Empirical genome evolution models root the tree of life

Ajith Harish ^{a*} and Charles G Kurland ^{b*}
