This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Clinical Implications for Biochemical Diagnostic Thresholds of Adrenal Sufficiency Using a Highly Specific Cortisol Immunoassay.

Abbreviated Title: Adrenal testing with a high specificity cortisol assay

Kline GA¹, Buse, J², Krause RD^{2*}

1 Department of Medicine (Endocrinology), University of Calgary

2 Department of Pathology and Laboratory Medicine, University of Calgary; Calgary Laboratory Services

- Dr Krause deceased October 2016.

Key Terms

1. Adrenal Insufficiency
2. Addison's Disease
3. Cortisol
4. Adrenal Disease

Word Count 3371

Email: Gregory.kline@albertahealthservices.ca

Funding/Grant Agency: none

Disclosure Statement: The authors have nothing to disclose.

This work has been presented at the Society for Endocrinology Meeting (BES) November 2016

Contributors statement

Dr. Kline conceived of the project, performed the clinical adjudication and primary analysis and wrote the paper

Dr. Buse performed the LCMS comparisons along with critical manuscript edits

Dr. Krause co-designed the project, performed the laboratory tests using both immunoassays and critically revised the analysis and manuscript
