Differential proteomics reveals novel insights into *Nosema*–honey bee interactions

Christoph Kurze, Ryan Dosselli, Julia Grassl, Yves Le Conte, Per Kryger, Boris Baer, Robin F.A. Moritz

PII: S0965-1748(16)30151-5

DOI: [10.1016/j.ibmb.2016.10.005](https://doi.org/10.1016/j.ibmb.2016.10.005)

Reference: IB 2885

To appear in: *Insect Biochemistry and Molecular Biology*

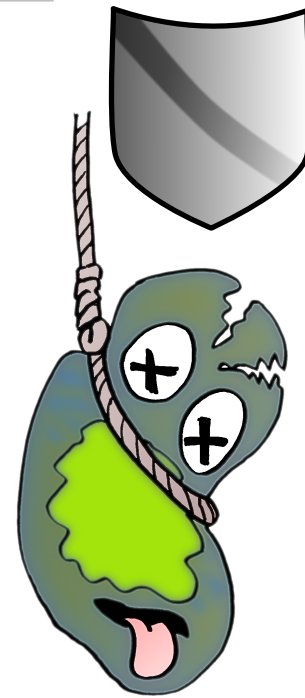

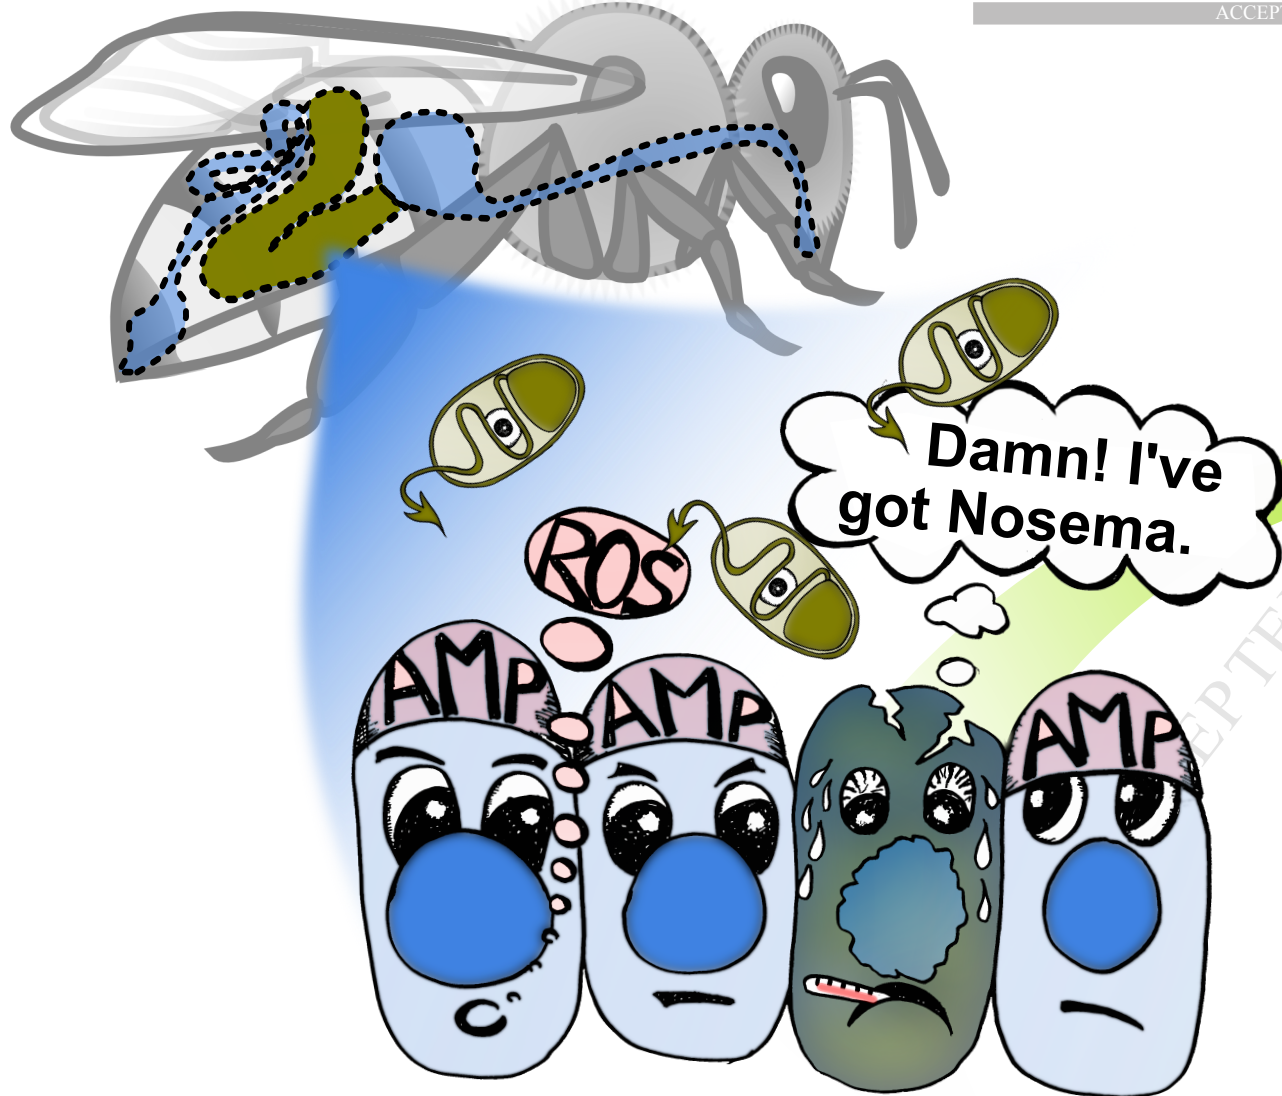

Received Date: 22 July 2016

Revised Date: 20 October 2016

Accepted Date: 21 October 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Tolerant bees:
NIT1
CG7816-like

Sensitive bees:
Nosema HSP70
NCER_100570
Peroxioredoxin
