8 **Abstract**

9 Separation anxiety has long been recognized as an anxiety-related disorder in dogs that is
10 only observed in the owner's real absence or perceived absence. Over the past four decades,
11 this condition has been the most commonly discussed in published studies, but etiology,
12 treatment, and prevention remain elusive. A review of the literature indicates a lack of
13 comparative studies. Little progress has been made to build a new understanding beyond
14 the clinical symptomology. Future research employing more rigorous designs and
15 systematically building upon a clearly defined research questions is needed to advance our
16 knowledge of this most common behavioral problems in dogs.
