

## Accepted Manuscript

Title: The relation between energy intake and chewing index of diets fed to nursing ewes

Authors: M.V. Nielsen, E. Nadeau, B. Markussen, C. Helander, M. Eknæs, P. Nørgaard

PII: S0921-4488(17)30176-1  
DOI: <http://dx.doi.org/doi:10.1016/j.smallrumres.2017.06.017>  
Reference: RUMIN 5509

To appear in: *Small Ruminant Research*

Received date: 18-9-2016  
Revised date: 20-5-2017  
Accepted date: 19-6-2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## The relation between energy intake and chewing index of diets fed to nursing ewes

### Highlights

- Metabolizable energy intake in nursing ewe decreased with increasing chewing index
- The intercept value was considered as the metabolic intake capacity of the ewe
- Decreasing intake at increasing chewing index is related to intake capacity
- The estimated maximum daily chewing time increased during early lactation
