This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- When fed individually the fastest ewe consumed 17.0% more concentrate within 60 seconds than the ewe with the slowest concentrate consumption rate
- When fed in pairs the fastest ewe consumed 19.2% more concentrate within 60 seconds than the ewe with the slowest concentrate consumption rate
- Concentrate consumption rate is not affected by bodyweight or parity, but is rather an individual characteristic
