This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Dear Journal of Pain and Symptom Management

We are enclosing here the manuscript of a cross-sectional study on the symptom burden of Chinese patients with tumors involving the spine. We translated, culturally adapted, and validated the MD Anderson Symptom Inventory - Spine Tumor Module at a major referral center for spine tumor in Northern China. Our previous research in this area has resulted in more than 20 peer-reviewed publications in international journals. As the current manuscript represents one of the first studies on the symptom burden of spine tumor and consists of the largest number of patients to the best of our knowledge, we believe the journal of Spine would be an ideal venue to report our findings.

Thank you!

Zhongjun Liu
