Disclosures: There are no prior publications or submissions with any overlapping information, including studies and patients. This manuscript has not been and will not be submitted to any other journal while it is under consideration. Each author listed on the manuscript has seen and approved the submission of this version of the manuscript and takes full responsibility for the manuscript. The authors have no financial or conflicts of interest to disclose. This research received no specific grant from any funding agency in the public, commercial, or not-for-profit sectors.

Precis: In our experience, indeterminate diagnoses (FLUS+FN+SM) accounted for the majority (60%) of preoperative FNAs for incidental microcarcinoma (size ≤ 0.5 cm) when compared to 27% for those of non-incidental microcarcinoma (size >0.5 cm and ≤ 1 cm) ($p < 0.05$, chi-square test).

KEYWORDS: thyroid; FNA; cytology; the Bethesda System; microcarcinoma
