Omics analysis of human bone to identify genes and molecular networks regulating skeletal remodeling in health and disease

Sjur Reppe, Harish K. Datta, Kaare M. Gautvik

PII: S8756-3282(17)30154-0
DOI: doi: [10.1016/j.bone.2017.04.012](https://doi.org/10.1016/j.bone.2017.04.012)
Reference: BON 11305
To appear in: *Bone*
Received date: 10 December 2016
Revised date: 13 April 2017
Accepted date: 22 April 2017

⁵University of Oslo, Institute of Basic Medical Sciences, Oslo, Norway.

Highlights

- Gene expression patterns differ between stressed and non-stressed bone.
- Combined omics have identified BMD associated genes and proteins.
- Several BMD/osteoporosis associated transcripts are related to Wnt signaling.
