Title: Palmitoylation of *Plasmodium* alveolins promotes cytoskeletal function

Author: Annie Z. Tremp Fatimah S. Al-Khattaf Johannes T. Dessens

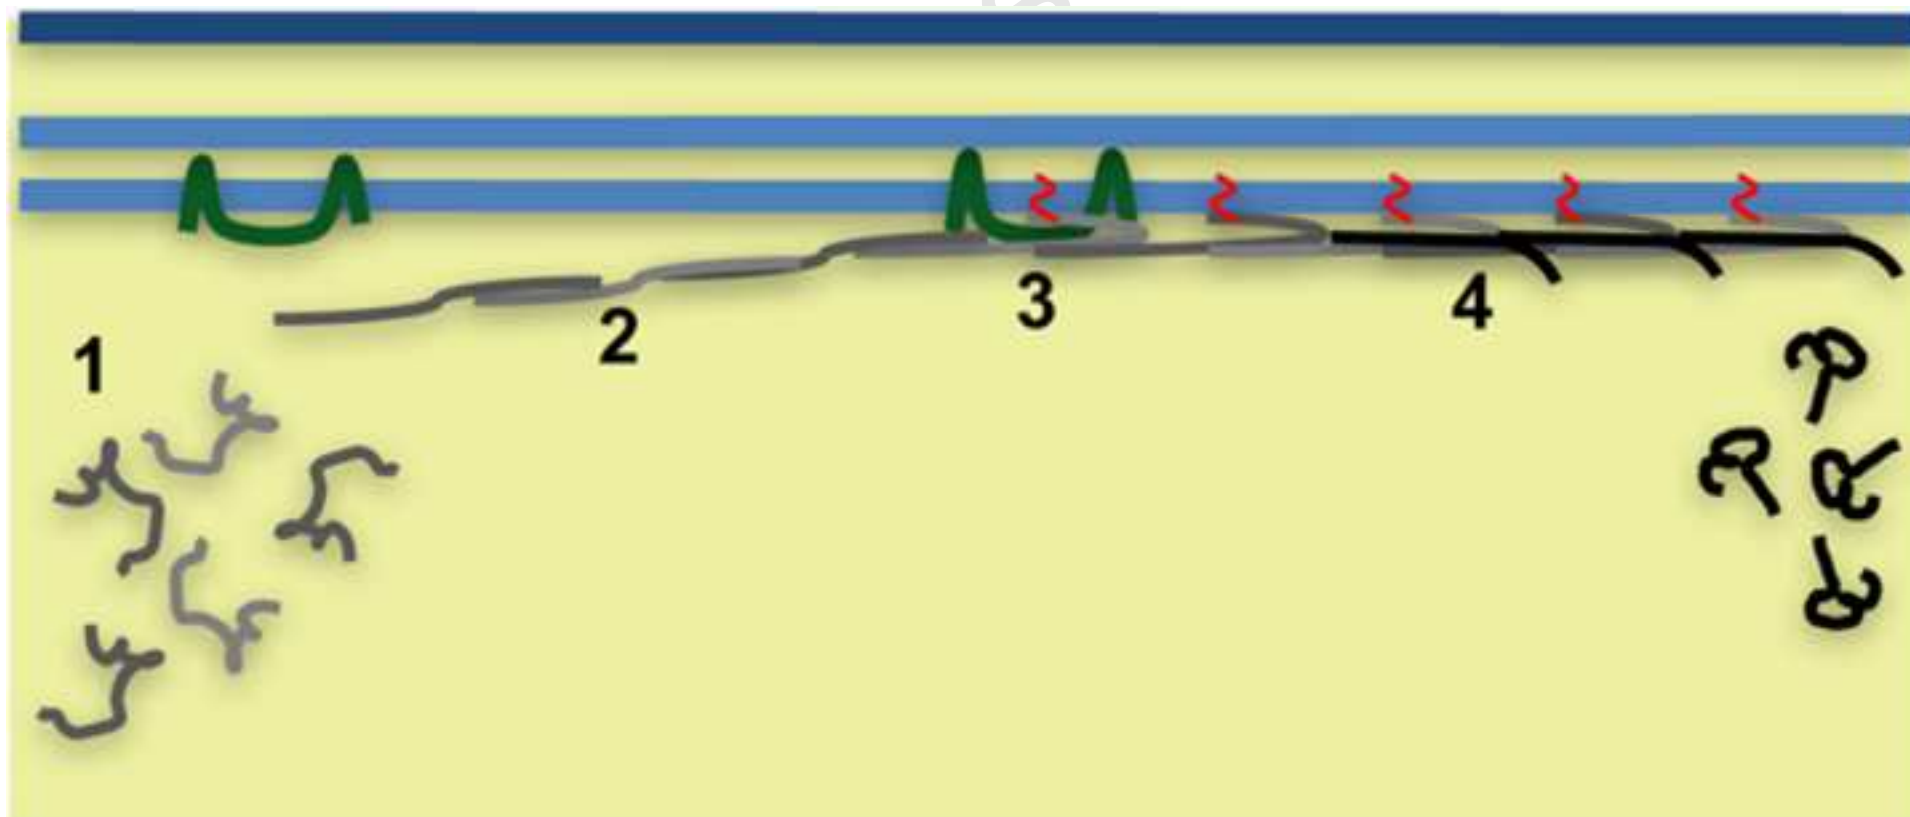

PII: S0166-6851(17)30019-1
DOI: <http://dx.doi.org/doi:10.1016/j.molbiopara.2017.02.003>
Reference: MOLBIO 11051

To appear in: *Molecular & Biochemical Parasitology*

Received date: 11-11-2016
Revised date: 8-2-2017
Accepted date: 15-2-2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Alveolin (grey) protein synthesis in the cytoplasm (yellow) (1) is followed by their assembly into filaments at the inner membrane complex (light blue) (2), where palmitate (red) is added by palmitoyl-acyl-transferase (green) (3), facilitating interaction with other alveolins (black) (4).
