Protein backbone flexibility pattern is evolutionarily conserved in the *Flaviviridae* family: a case of NS3 protease in Flavivirus and Hepacivirus

Navaneethan Palanisamy, Dario Akaberi, Johan Lennerstrand

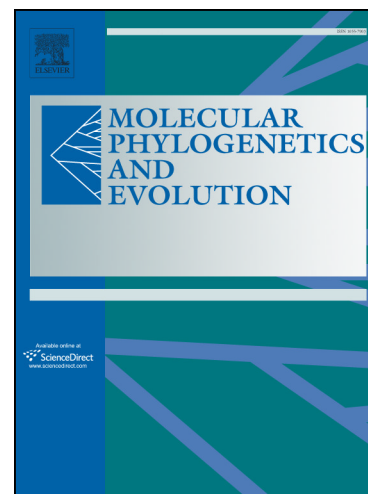

PII: S1055-7903(17)30627-9
DOI: <https://doi.org/10.1016/j.ympev.2017.09.015>
Reference: YMPEV 5925

To appear in: *Molecular Phylogenetics and Evolution*

Received Date: 22 August 2017
Revised Date: 17 September 2017
Accepted Date: 20 September 2017

Please cite this article as: Palanisamy, N., Akaberi, D., Lennerstrand, J., Protein backbone flexibility pattern is evolutionarily conserved in the *Flaviviridae* family: a case of NS3 protease in Flavivirus and Hepacivirus, *Molecular Phylogenetics and Evolution* (2017), doi: <https://doi.org/10.1016/j.ympev.2017.09.015>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Protein backbone flexibility pattern is evolutionarily conserved in the
Flaviviridae family: a case of NS3 protease in Flavivirus and Hepacivirus**
