Title: Sensory-mechanical effects of a dual bronchodilator and its anticholinergic component in COPD

Authors: Denis E. O'Donnell, Amany F. Elbehairy, Azmy Faisal, J. Alberto Neder, Katherine A. Webb, Canadian Respiratory Research Network (CRRN)

PII: S1569-9048(17)30213-6
DOI: <https://doi.org/10.1016/j.resp.2017.10.001>
Reference: RESPNB 2875

To appear in: *Respiratory Physiology & Neurobiology*

Received date: 28-6-2017
Revised date: 29-9-2017
Accepted date: 2-10-2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Sensory-mechanical effects of a dual bronchodilator and its anticholinergic component in COPD

Authors:

Denis E. O'Donnell^a, Amany F. Elbehairy^{a,b}, Azmy Faisal^{a,c}, J. Alberto Neder^a, Katherine A. Webb^a; Canadian Respiratory Research Network (CRRN).

Institutions:

^a Respiratory Investigation Unit, Department of Medicine, Queen's University & Kingston General Hospital, Kingston, Ontario, Canada.

^b Department of Chest Diseases, Faculty of Medicine, Alexandria University, Alexandria, Egypt.

^c Faculty of Physical Education for Men, Alexandria University, Alexandria, Egypt.

Running head: Dual bronchodilators and respiratory neural drive in COPD

HIGHLIGHTS

- LABA/LAMA improved spirometry more than LAMA alone in moderate COPD.
- LABA/LAMA versus LAMA improved airway and respiratory muscle function during exercise.
- LABA/LAMA reduced “unpleasantness of breathing” during exercise compared with LAMA.
- Exercise endurance was similar after treatment with LABA/LAMA versus LAMA alone.
