This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Word count (body): 2,640; Word count (abstract): 243

A Multicenter, Randomized Trial of Ramped Position versus Sniffing Position during Endotracheal Intubation of Critically Ill Adults

Running head: Ramped vs Sniffing Position for ICU Intubation

Matthew W. Semler, MD, MSc¹; David R. Janz, MD, MSc²; Derek W. Russell, MD³; Jonathan D. Casey, MD¹; Robert J. Lentz, MD¹; Aline N. Zouk, MD³; Bennett P. deBoisblanc, MD²; Jairo I. Santanilla, MD^{2,4}; Yasin A. Khan, MD²; Aaron M. Joffe, DO⁵; William S. Stigler, MD³; Todd W. Rice, MD, MSc¹ for The Check-UP Investigators* and the Pragmatic Critical Care Research Group

* A full list of Check-UP Investigators may be found in the acknowledgements.
