This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Elevated NT-proBNP is associated with unfavorably altered plasma fibrin clot properties in atrial fibrillation

Short title: Determinants of clot properties in atrial fibrillation

Paweł T. Matusik, MD, PhD^{1,2}, Patrycja S. Matusik, MD³, Zdzisława Kornacewicz-Jach, MD, PhD⁴, Barbara Malecka, MD, PhD^{1,5}, Andrzej Ząbek, MD, MSc, PhD¹, Anetta Undas, MD, PhD⁵

Contributions:

P.T.M. (pawel.matusik@wp.eu): acquisition of data, statistical analysis, interpretation of data, writing the manuscript.

P.S.M. (patrycja.s.matusik@gmail.com) and A.Z. (andrzej_j_z@poczta.onet.pl): acquisition of data; revising article critically for important intellectual content.

Z.K.-J. (kardio@sci.pam.szczecin.pl) and B.M. (barbara_malecka@o2.pl): data interpretation and revising article critically for important intellectual content; final approval of the version to be submitted.

A.U. (mmundas@cyf-kr.edu.pl): the conception and design of the study, acquisition of data, data interpretation, final approval of the version to be submitted.

All authors have approved the final article.

Acknowledgment

The authors thank Agnieszka Pac, PhD for her valuable assistance in performing statistical analyses and interpretation of the data. This work was supported by a grant of Jagiellonian University (K/ZDS/005802), to A.U. This study was an initiative of the Women's Section of the Polish Cardiac Society.

Conflict of interest: The authors report no relationships that could be construed as a conflict of interest.

Keywords: Atrial fibrillation, fibrin, clot properties, NT-proBNP
