This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Quantitative changes in late gadolinium enhancement at cardiac magnetic resonance in the early phase of acute myocarditis

Enrico Ammirati*¹, Francesco Moroni*², Paola Sormani^{3,4}, Angelica Peritore³, Angela Milazzo³, Giuseppina Quattrocchi³, Manlio Cipriani¹, Fabrizio Oliva¹, Cristina Giannattasio^{1,4}, Maria Frigerio¹, Alberto Roghi³, Paolo G. Camici², and Patrizia Pedrotti³

Enrico Ammirati and Francesco Moroni contributed equally.

Paolo G Camici and Patrizia Pedrotti share Senior Authorship

All authors take responsibility for all aspects of the reliability and freedom from bias of the data presented and their discussed interpretation
