This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Title: Treatment of chronic total occlusions in native coronary arteries by drug-coated balloons without stenting - a feasibility and safety study

Philine J. Köln¹, Bruno Scheller², Hounq Bang Liew³, Tuomas T. Rissanen⁴, Wan Azman Wan Ahmad⁵, Ralf Weser⁶, Thelse Hauschild⁷, Amin Ariff Nuruddin⁸, Yvonne P. Clever⁹, Hee Hwa Ho¹⁰, Franz X. Kleber¹¹

Corresponding Author: Franz X. Kleber, Cardio Centrum Berlin, Academic Teaching Institution, Charité - Universitätsmedizin, Unter den Linden 21, 10117 Berlin, Germany; e-mail: post@fxkleber.de

Keywords: Drug-coated balloon (DCB) - Chronic coronary total occlusion (CTO) - Percutaneous coronary intervention (PCI) - Paclitaxel - Drug-eluting stent (DES) - Balloon angioplasty

Acknowledgements: This is an investigator-driven study. There was no funding provided from any public, commercial or not-for-profit sectors.

Conflict of interest: Prof. Scheller is shareholder of InnoRa GmbH (Berlin, Germany) and received lecture fees and travel support from B.Braun. Prof. Kleber received consultancy fees from B.Braun. All other authors declared no potential conflict of interest.
