### **Funding**

This research received no specific grant from any funding agency in the public, commercial, or not-for-profit sectors.

### **Conflict of interest**

None declared.

**Short title:** Craniofacial Pain and Sleep.

### **Summary**

Chronic craniofacial pain involves the head, face and oral cavity and is associated with significant morbidity and high levels of health care utilization. A bidirectional relationship is suggested in the literature for poor sleep and pain, and craniofacial pain and sleep are reciprocally related. We review this relationship and discuss management options.
