This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Postoperative neurosurgical infection rates after shared-resource intraoperative magnetic resonance imaging
– a single center experience with 195 cases**

Nikolaj Dinevski^a (MD), Johannes Sarnthein^a (PhD), Flavio Vasella^a (MD), Jorn Fierstra^a (MD, PhD), Athina Pangalu^b (MD), David Holzmann^c (MD), Luca Regli^a (MD), Oliver Bozinov^a (MD)

a Department of Neurosurgery, University Hospital Zurich, University of Zurich, Frauenklinikstrasse 10, 8091 Zurich, Switzerland.

b Department of Neuroradiology, University Hospital Zurich, University of Zurich, Frauenklinikstrasse 10, 8091 Zurich, Switzerland.

c Department of Otorhinolaryngology Head and Neck Surgery, University Hospital Zurich, Frauenklinikstrasse 24, 8091 Zurich, Switzerland.

Corresponding Author: Oliver Bozinov, MD, Department of Neurosurgery, University Hospital Zurich, University of Zurich, Frauenklinikstrasse 10, 8091 Zurich, Switzerland, oliver.bozinov@usz.ch

Key Words: ioMRI; shared-resource; complications; infection; craniotomy; transsphenoidal skull base surgery

Funding: This research did not receive any specific grant from funding agencies in the public, commercial, or not-for-profit sectors.

Conflicts of interest: The Department of Neurosurgery and the Department of Neuroradiology at the University Hospital Zurich are reference centers for ioMRI scanners of Siemens AG
