This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

The relationship of *Candida* colonization of the oral and vaginal mucosa of mothers and oral mucosa of their newborns at birth

Rund M. Al-Rusan^a BDS, MDS; Azmi M.G. Darwazeh^b BDS, MSc, PhD, FFDRCSI; Isam M. Lataifeh^c MBBS, CHSM, J. Board, DGO/RANZCOG

^a Postgraduate student, Department of Preventive Dentistry, Faculty of Dentistry; ^b Professor in oral medicine, Department of Oral Medicine and Surgery, Faculty of Dentistry; ^c Professor in obstetrics and gynecology, Faculty of Medicine, Jordan University of Science and Technology.

Statement of clinical relevance: Newborns delivered per-vaginally to *Candida* colonized mothers are more susceptible than newborns delivered to uncolonized mothers to acquire oral *Candida*, which may constitute a health risk factor in immunocompromised infants.

Disclosure: This study was supported by a grant from the Deanship of Research at Jordan University of Science and Technology (Grant no: 314/2014). This study was presented in partial fulfillment of the requirements for the Master of Dental Sciences of Dr. Rund M Al-Rusan in Jordan University of Science and Technology, Jordan. This study was also presented and nominated for the “Research Prize” at the First Scientific Day for Postgraduate Research Projects in Jordan University of Science and Technology held in April, 2016.
