This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Title: Apneic Oxygenation Reduces the Incidence of Hypoxemia during Emergency Intubation: a Systematic Review and Meta-Analysis

Running head: Apneic Oxygenation reduces hypoxemia

Authors and affiliations:

Montréal (Québec) Canada

Scott Weingart, M.D.
Division of Emergency Critical Care
Stony Brook Hospital
Stony Brook, NY, USA

Keywords: airway management; oxygenation; apneic oxygenation, rapid sequence intubation; crash intubation.

Meetings: This work has not been presented in any meetings, nor previously published in any form

Funding: This work has not been supported by any grant or any other source of funding.

Conflicts of interest: None for all three authors.

Word count: 2084 words

Author contributions: IP conceived the study. Data were extracted and summarized by SM and IP. IP analyzed the data, and drafted the manuscript. All authors contributed substantially to its revision. IP takes responsibility for the paper as a whole.
