This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Targeted Apoptosis of Parietal Cells is Insufficient to Induce Metaplasia in Stomach

SHORT TITLE: PARIETAL CELL DEATH AND METAPLASIA

Joseph Burclaff¹, Luciana H. Osaki¹, Dengqun Liu², James R. Goldenring³, Jason C. Mills¹

¹Division of Gastroenterology, Departments of Medicine, Pathology & Immunology, and Developmental Biology, Washington University, St. Louis, Missouri. ²Institute of Combined Injury, College of Preventive Medicine, State Key laboratory of Trauma, Burns and Combined Injury, Third Military Medical University, Chongqing, China. ³Nashville VA Medical Center and the Epithelial Biology Center and Departments of Surgery and Cell and Developmental Biology, Vanderbilt University School of Medicine, Nashville, Tennessee

J.C.M. is funded by the NIH National Institute of Diabetes and Digestive and Kidney Diseases (R01s DK094989 and DK105129) and the Siteman Cancer Center Investment Program, J.B. is supported by the NIGMS Cell and Molecular Biology Training Grant (GM007067); Histology performed by Digestive Disease Research Core Centers (Grant #P30DK052574, AITAC Core); J.R.G. is supported by grants from a Department of Veterans Affairs Merit Review Award (I01BX000930) and NIH R01 DK071590.

Abbreviations: DT: diphtheria toxin; DTR: Diphtheria toxin receptor; SPEM: Spasmolytic polypeptide-expressing metaplasia; TAM: Tamoxifen
