This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Title: Quantitative assessment of genetic testing for type 2 diabetes mellitus based on findings of genome-wide association studies

Authors: Satoru Kodama^{a*} Kazuya Fujihara^b Hajime Ishiguro^b Chika Horikawa^c
Nobumasa Ohara^b Yoko Yachi^d Shiro Tanaka^e Hitoshi Shimano^f Kiminori Kato^a
Osamu Hanyu^b Hirohito Sone^b

Running title: genetic testing for type 2 diabetes

Word counts: 980 words

***Corresponding author.** Department of Laboratory Medicine and Clinical Epidemiology for Prevention of Noncommunicable Diseases, Niigata University Graduate School of Medical and Dental Sciences, 1-757 Asahimachi Cyuou-ku, Niigata, Niigata, Japan, 951-8510, Phone: +81-25-368-9024, Fax: +81-25-368-9024, Email address: ybbkodama@gmail.com

Keywords: genetics, screening, type 2 diabetes, meta-analysis

Abbreviations: GWAS, genome-wide association studies; HSROC, hierarchical summary receiver-operating characteristic, LR+: positive likelihood ratio; LR-, negative likelihood ratio; RA, risk allele; SNP, single nucleotide polymorphism; T2DM, type 2 diabetes mellitus
