Torsional stiffness after subtalar arthrodesis using second generation headless compression screws: Biomechanical comparison of 2-screw and 3-screw fixation

Markus Riedl, Richard R. Glisson, Takumi Matsumoto, Stefan G. Hofstaetter, Mark E. Easley

PII: S0268-0033(17)30093-1
DOI: doi: [10.1016/j.clinbiomech.2017.04.004](https://doi.org/10.1016/j.clinbiomech.2017.04.004)
Reference: JCLB 4314
To appear in: *Clinical Biomechanics*
Received date: 18 November 2016
Accepted date: 12 April 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Torsional stiffness after subtalar arthrodesis using second generation headless compression screws: Biomechanical comparison of 2-screw and 3-screw fixation
