Title: Superficial plantar cutaneous sensation does not trigger barefoot running adaptations

Authors: M.A. Thompson, K.M. Hoffman

PII: S0966-6362(17)30492-7

DOI: <http://dx.doi.org/doi:10.1016/j.gaitpost.2017.06.269>

Reference: GAIPOS 5477

To appear in: *Gait & Posture*

Received date: 21-11-2016

Revised date: 13-6-2017

Accepted date: 26-6-2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

SUPERFICIAL PLANTAR CUTANEOUS SENSATION DOES NOT TRIGGER BAREFOOT RUNNING ADAPTATIONS

Highlights:

- Sensory feedback contributes to barefoot gait adaptations
- Anesthetizing superficial skin of the plantar foot did not alter barefoot running
- Deep/subcutaneous receptors likely cause barefoot running gait changes
