Title: Trunk biomechanics during hemiplegic gait after stroke:
a systematic review

Authors: Van Criekinge Tamaya, Saeys Wim, Halleman Ann,
Velghe Silke, Viskens Pieter-Jan, Vereeck Luc, De Hertogh
Willem, Truijen Steven

PII: S0966-6362(17)30077-2
DOI: <http://dx.doi.org/doi:10.1016/j.gaitpost.2017.03.004>
Reference: GAIPOS 5338

To appear in: *Gait & Posture*

Received date: 30-4-2016
Revised date: 27-2-2017
Accepted date: 2-3-2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Trunk biomechanics during hemiplegic gait after stroke: a systematic review

Highlights

- Stroke patients walk with less dissociation between thorax and pelvis
- After stroke less stability and symmetry is observed in thorax and pelvis
- Stroke patients show increased mediolateral and anteroposterior trunk movements
- Increasing walking speed normalizes thoracic and pelvic movements
