The Impact of Imaging Modality on the Measurement of Coronal Plane Alignment Following Total Knee Arthroplasty

Denis Nam, MD, MSc, Sravya Vajapey, BS, Ryan M. Nunley, MD, Robert L. Barrack, MD

PII: S0883-5403(16)00214-X

DOI: [10.1016/j.arth.2016.02.063](https://doi.org/10.1016/j.arth.2016.02.063)

Reference: YARTH 55021

To appear in: *The Journal of Arthroplasty*

Received Date: 23 December 2015

Revised Date: 16 February 2016

Accepted Date: 27 February 2016

Please cite this article as: Nam D, Vajapey S, Nunley RM, Barrack RL, The Impact of Imaging Modality on the Measurement of Coronal Plane Alignment Following Total Knee Arthroplasty, *The Journal of Arthroplasty* (2016), doi: 10.1016/j.arth.2016.02.063.

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**The Impact of Imaging Modality on the Measurement of Coronal Plane Alignment
Following Total Knee Arthroplasty**

Running Title: Effect of Imaging Modality on Alignment after TKA
