Title: Influence of the mental health status on a new measure of objective functional impairment in lumbar degenerative disc disease

Author: Martin N. Stienen, Nicolas R. Smoll, Holger Joswig, Jan Snagowski, Marco V. Corniola, Karl Schaller, Gerhard Hildebrandt, Oliver P. Gautschi

PII: S1529-9430(16)31129-9
DOI: <http://dx.doi.org/doi: 10.1016/j.spinee.2016.12.004>
Reference: SPINEE 57222

To appear in: *The Spine Journal*

Received date: 18-7-2016
Revised date: 23-10-2016
Accepted date: 9-12-2016

Gautschi, Influence of the mental health status on a new measure of objective functional impairment in lumbar degenerative disc disease, *The Spine Journal* (2016), <http://dx.doi.org/doi: 10.1016/j.spinee.2016.12.004>.

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

1 **Influence of the mental health status on a new measure of objective**
2 **functional impairment in lumbar degenerative disc disease**

23 **Acknowledgments**

24 The authors thank Cornelia Lüthi (study nurse of the Department of Surgery, XXX Hospital
25 XXX), Ivan Chau (Resident in Neurosurgery, XXX Hospital XXX) and Dario Jucker (medical
26 student of the University of YYY) for their important contribution in the collection of data that
27 are reported in this article.

28

29 **Abstract**

30 **Background Context:** The Timed Up and Go (TUG) test has recently been proposed as a
31 simple and standardized measure for objective functional impairment (OFI) in patients with
32 lumbar degenerative disc disease (DDD).
