16	IRB approval:
17	The data used in this study contains no patient identifiers. This project was considered exempt from
18	institutional review.
19	Abstract
20	Background Context
21	Surgical treatment for adult spinal deformity improves patient quality of life; however trends in
22	surgical utilization in the elderly, whom may be at higher risk for complications, remain unclear.
23	Purpose
