15 **Abstract**

16 **Background Context**

17 Patient satisfaction is becoming an increasing common proxy for surgical quality; however, the  
18 correlation between patient satisfaction and surgical outcomes two and five years after anterior  
19 cervical surgery has not been evaluated.

20

21 **Purpose:** To determine if patient satisfaction is predicted by improvement in patient reported  
22 outcomes (PRO) two and five years after anterior cervical spine surgery.
