Title: Tracking recurrence of correlation structure in neuronal recordings

Author: Samuel A. Neymotin Zoe N. Talbot Jeeyune Q. Jung André A. Fenton William W. Lytton

PII: S0165-0270(16)30234-5
DOI: http://dx.doi.org/doi:10.1016/j.jneumeth.2016.10.009
Reference: NSM 7611

To appear in: *Journal of Neuroscience Methods*

Received date: 26-8-2016
Revised date: 7-10-2016
Accepted date: 11-10-2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

PCo, a multiscale method, determines the recurrence of neural correlation structure

PCo operates at multiple temporal and spatial scales without dimensional reduction

PCo detects different place cell ensemble states which represent the environment

PCo reveals anomalous brain states in field potentials from an animal epilepsy model
