This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- The bioavailability and bioaccessibility of chlorinated PFRs were studied for the first time.
- SPME and Tenax extraction were first applied to predict the bioavailability of TCIPP and TDCIPP.
- Both extractions predicted well the bioavailability of TCIPP and TDCIPP in sediment
- Tenax extraction worked better.
