Development of a predictive model for lead, cadmium and fluorine soil–water partition coefficients using sparse multiple linear regression analysis

Kengo Nakamura, Tetsuo Yasutaka, Tatsu Kuwatani, Takeshi Komai

PII: S0045-6535(17)31182-7

DOI: [10.1016/j.chemosphere.2017.07.131](https://doi.org/10.1016/j.chemosphere.2017.07.131)

Reference: CHEM 19664

To appear in: *ECSN*

Received Date: 26 March 2017

Revised Date: 6 July 2017

Accepted Date: 25 July 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

1 **Development of a predictive model for Lead, Cadmium and Fluorine soil–water partition**  
2 **coefficients using sparse multiple linear regression analysis**
